## **AVIATION QUESTION OF THE MONTH**

**Answer to last month's question:** *In regard to constructing an aircraft, what is an amateur? If a builder is an A&P is he still an amateur?*

**According to EAA Information Services:** As long as someone did not pay a builder who is an A&P to perform the work, he is an amateur. He could build his own aircraft and be an amateur since no one paid him to do the work. As soon as money, or anything of value, changes hands for work performed, he is no longer an amateur. The actual FAA definition is found in FAR 21.191(g): (g) Operating amateur-built aircraft. Operating an aircraft the major portion of which has been fabricated and assembled by persons who undertook the construction project solely for their own education or recreation.

**This Month's Question:**

Can an A&P sign off an annual condition inspection for an experimental amateur-built aircraft or must it be an IA?

**REMINDER:** Starting in April of this year (next month) the *Pea Patch Post* will be sent only by email to those folks who have email. They will not receive the paper newsletter unless they give this form to club Secretary John Magnan and indicate that they want the newsletter mailed to them.

We understand that some folks do not have or do not use email. We will continue to mail to these individuals, but you must let us know.
