

AVIATION QUESTION OF THE MONTH

Answer to last month's question: *Is it possible to fly an adequately equipped experimental gyroplane using an instrument rating in another category/class?*

According to EAA Information Services: The simple answer is yes, with single pilot and no passengers. The operating limitations allow it if the aircraft is properly equipped. Since there is not an instrument rating for gyroplanes, one needs to fly under an instrument rating of another category, i.e. airplane, helicopter, etc. One cannot carry passengers if they are not properly rated but there is not a limitation of using one's airplane instrument rating.

This Month's Question:

A pilot is an active military instructor pilot and his service time is coming to an end. He would like to become a CFI/MEI after he has been discharged. What does he have to do to complete this?
